# Preface

Essential Medicines are those that satisfy the priority health care needs of the population. They are selected with due regard to public health relevance, evidence on efficacy, safety and comparative cost-effectiveness.

This edition of the Essential Medicines List (EML) 2010 for Ghana has been derived from its companion Standard Treatment Guidelines 2010 to ensure harmony in treatment, procurement and re-imbursements. The medicines listed have been coded according to the Health Commodity Codes Catalogue of the Ministry of Health (2008) and their levels of use, based on the type of health facility, including midwifery practice, have been indicated.

I hope that all health providers would embrace this document as it continues to be an important tool in the management of medicines in the country. Meanwhile in line with its policy, the Ministry will leave no stone unturned to increase access to essential medicines that satisfy the priority health care needs of all Ghanaians.

Dr. Benjamin Kenbuor  
Hon. Minister for Health

May 2010

# Introduction

The medicines listed in this document are derived from the revised Standard Treatment Guidelines (2010) of the Ministry of Health. The criteria used to guide the selection of medicines were dependent on those used for the selection of medicines for the World Health Organisation Model List of Essential Medicines

The revision of the Standard Treatment Guidelines was based on published evidence or expert opinion. The final document was then field-tested among all categories of health professionals. As a consequence, medicines mentioned for the treatment of health problems in the Standard Treatment Guidelines have been included in this edition of the Essential Medicines List. In addition, comments on the 2004 Essential Medicines List collected from health professionals were considered on the basis of the WHO criteria by an expert panel. The criteria are:

- drug selection should be based on the results of efficacy and safety evaluations obtained in controlled clinical trials and epidemiological studies, and on the performance in general use in a variety of medical settings;
- when several drugs are available for the same indication, only the drug and the pharmaceutical form that provides the more convenient benefit / risk ratio should be selected;
- when two or more drugs are therapeutically equivalent, the selection should fall on:
  - the drug that has been more thoroughly investigated,
  - the drug with the most favourable pharmacokinetic properties,
  - the drug with the lowest cost, calculated on the basis of the whole course of treatment,
  - the drug with which health workers are already familiar,
  - the drug for which economically convenient manufacturing is available in the country,
  - the drug which shows better stability at the available storage conditions;

A fixed dose combination should be accepted only if clinical documentation justifies the concomitant use of more than one drug, and the combination provides a proven advantage over single compounds administered separately in therapeutic effect, safety, patients' compliance or cost.

Furthermore, guidelines are proposed to confine the circulation of essential drugs to specific and appropriate settings and levels of health care delivery. For this, drugs have been grouped into the following categories:

|          |                                |
|----------|--------------------------------|
| Level A  | - Community                    |
| Level M  | - Midwifery                    |
| Level B1 | - Health Centre without Doctor |
| Level B2 | - Health Centre with Doctor    |
| Level C  | - District Hospital            |
| Level D  | - Regional/Teaching Hospital   |
| Level SD | - Specialist Drugs             |
| Level PD | - Programme Drugs              |

Also drugs marked as NR imply that at the time of publication, those drugs were not reimbursed by the National Health Insurance Authority (NHIA); whereas drugs marked as R are drugs that are reimbursed by the NHIA based on the benefits package.

Specialist Drugs are restricted for use by qualified specialists who may request for them. Programme Drugs are those drugs used in public health programmes of the Ministry of Health and as such used within the guidelines of the specific programmes.

In previous editions, the British Approved Name (BAN) was adopted for all medicines in the Essential Medicines List (EML). This current issue uses only the Recommended International Non-Proprietary Name (rINN) in line with WHO recommendations and practice.

It is the hope of the Ministry that health professionals will support this document by providing comments and suggestions towards to inform the next review

Comments and suggestions should be sent to:
